Introduction of Klimahaus Bremerhaven

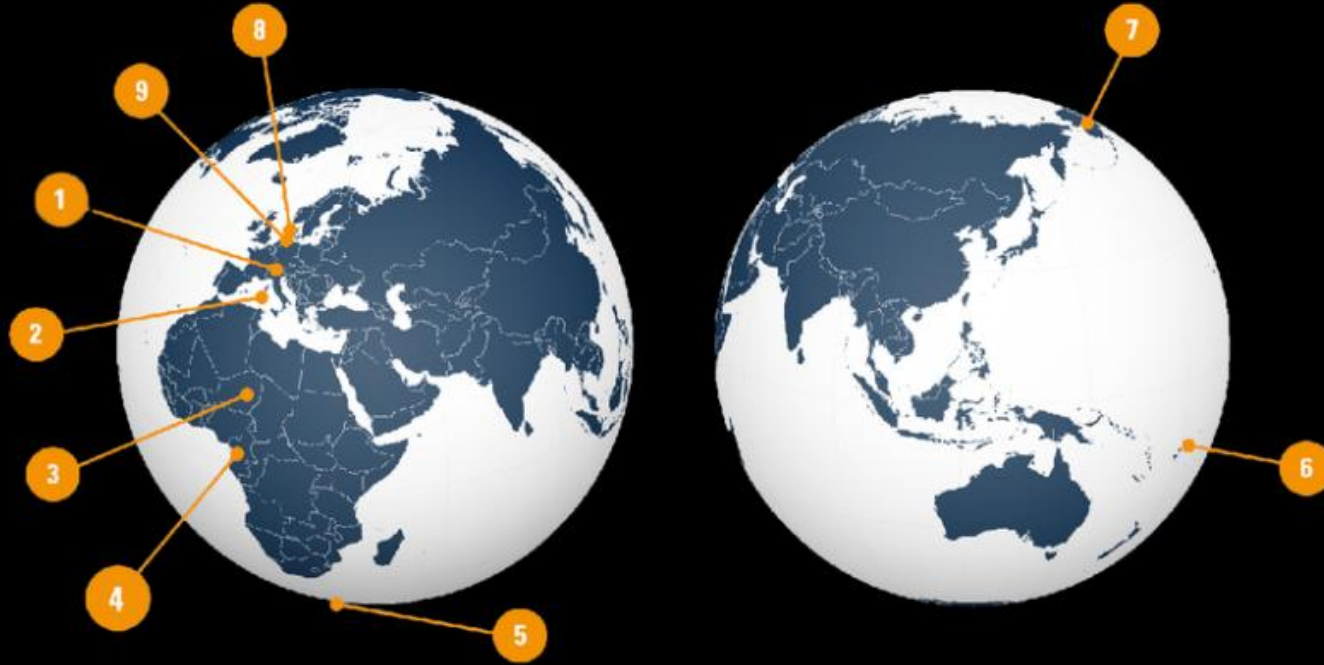

- Klimahaus is an immersive climate experience museum where visitors explore different climate zones.
- Located in Bremerhaven, a city shaped by global trade, migration, and maritime industries.
- Faces rising sea levels and extreme weather, making it a fitting location for a climate awareness museum.

About Journey

The journey follows the 8° East longitude and crosses nine different climate zones, with each station simulating real temperature, humidity, light and wind speed.

Different Climate Experiences

Sensory elements like temperature shifts, soundscapes, and landscape replication make the experience more impactful.

Klimahaus transforms climate change from abstract data into a tangible, personal experience

Visitors can experience real temperature, humidity, wind, and climate conditions.

Different climate zones: from the heat of the Sahara to the icy cold of Antarctica

The journey continues from the
scorching heat of Africa to the
eternal ice and snow of Antarctica

At a dry 35 degrees Celsius, you
can not only feel the heat of the
desert, but also find parts of the
landscape recreated on a 1:1 scale

Sustainability Practices

Despite the extensive exhibition technology, operations in the Climate House generate no additional carbon dioxide emissions.

A special fluid transports the heat from the house into the ground and brings cool air upwards.

The intelligent combination of proven technologies and innovative concepts has produced impressive results: The Climate House's carbon footprint is less than 300 grams of CO₂ per visitor.

Let's go to Station 2

Sardinia's exhibit immerses visitors in a microcosmic world where the effects of climate change are felt on the smallest scale. Upon entry, visitors are metaphorically shrunk to the size of an insect, allowing them to explore the intricate ecosystems of Sardinia from a new perspective.

Immersive Exhibition

Exhibition techniques

Future-Oriented: Experiencing Ecological Breakdown Firsthand

Through immersive techniques like environmental simulation and dramatic scale manipulation, visitors directly witness the cascading impacts of climate change.

Objects

Historical & Community-Focused: The Butterfly Effect in Action

Visitors encounter the butterfly effect and this object reflects historical structures of environmental degradation while also empowering visitors to consider their role in community-driven environmental transitions.

The Commissions

This exhibit was commissioned by the museum to bridge scientific awareness with emotional resonance. Through sensory storytelling—using visual effects, soundscapes, and symbolic scaling—cultural professionals guide audiences to feel the fragility of ecosystems and reflect on how human behaviors.

Paradigm Shifting

Paradigm-shifting practice

Encapsulates the principle of 'reconnecting' - multispecies relations and convivial co-existence by decentering human experience in favour of 'insect' experience.

More-than-human agency

- In the video, curator Alex and his Sardinian host, Stefania, are stopped by a herd of sheep
- Afterwards, their car refuses to start. Then, a storm breaks, confining them to the car
- Not only the sheep, but also the storm and the car, are active participants in the story. They have agency and are able to influence the humans' - and one another's - experiences

A Key Exhibition

Paradigm Shifting

Between Sardinia and the Sahara: parallel mobilities

- Stefania gives Alex a tin of sand that was blown in from the Sahara by the 'sirocco' wind
- She asks Alex about his next destination - which happens to be the Sahara
- The parallel migratory movements of dust and humans illustrate the entangled experiences of humans and the more-than-human world
