Fuel prices have begun to drop across capital cities as fuel excise cut kicks in today

Fuel prices begin to fall at petrol stations — quicker than expected

Consumers were warned the fuel excise cut might take weeks to be passed on to retailers, but prices have already begun to fall, NRMA says.

Fuel prices are finally dropping in Australia

Fuel excise cut kicks in today

Fuel prices are finally dropping across Australia

The government has cut the fuel excise by 50%, reducing prices by up to 26.3 cents per litre.

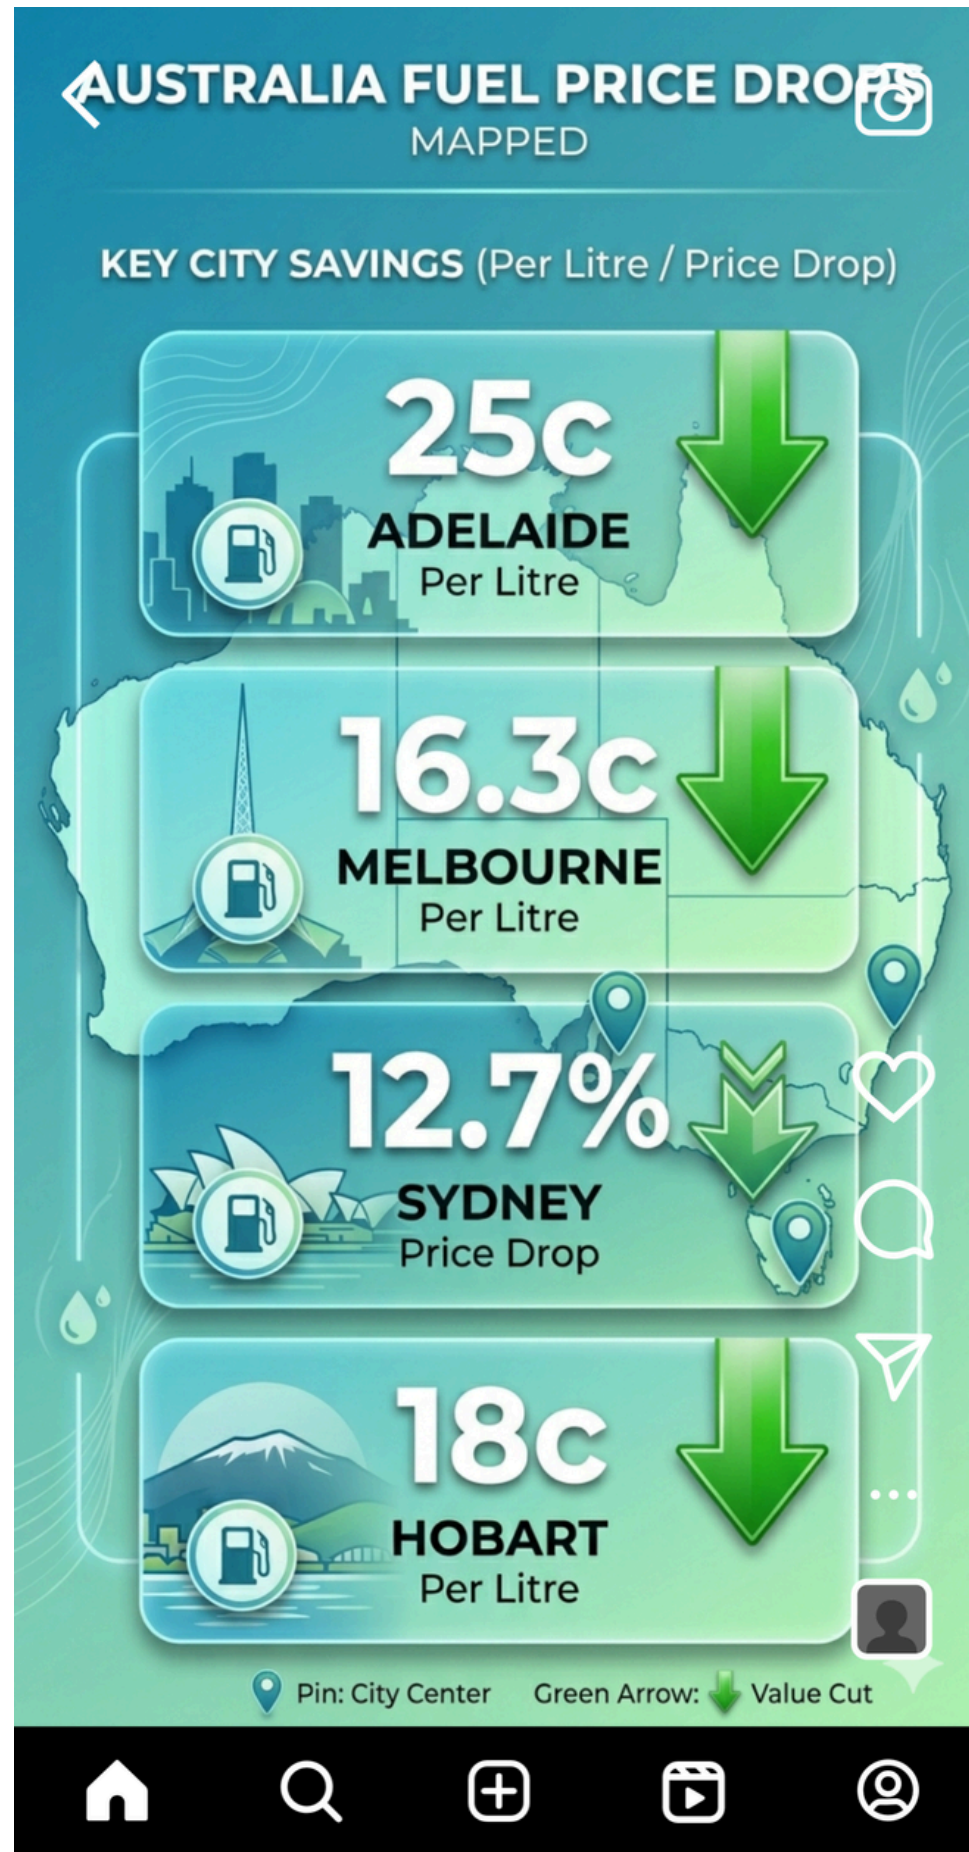

But while drivers may save money in the short term, experts warn the relief could be temporary due to global oil price pressures.

What does this mean for you? Lower costs now — but uncertainty ahead.

Price drops across cities

Fuel excise reduced by 50% and prices began to fall across major cities.

- Adelaide ↓ 25c
- Melbourne ↓ 16.3c
- Sydney ↓ 12.7%
- Hobart ↓ 18c

Variation depends on location and supply.

Why prices won't drop immediately?

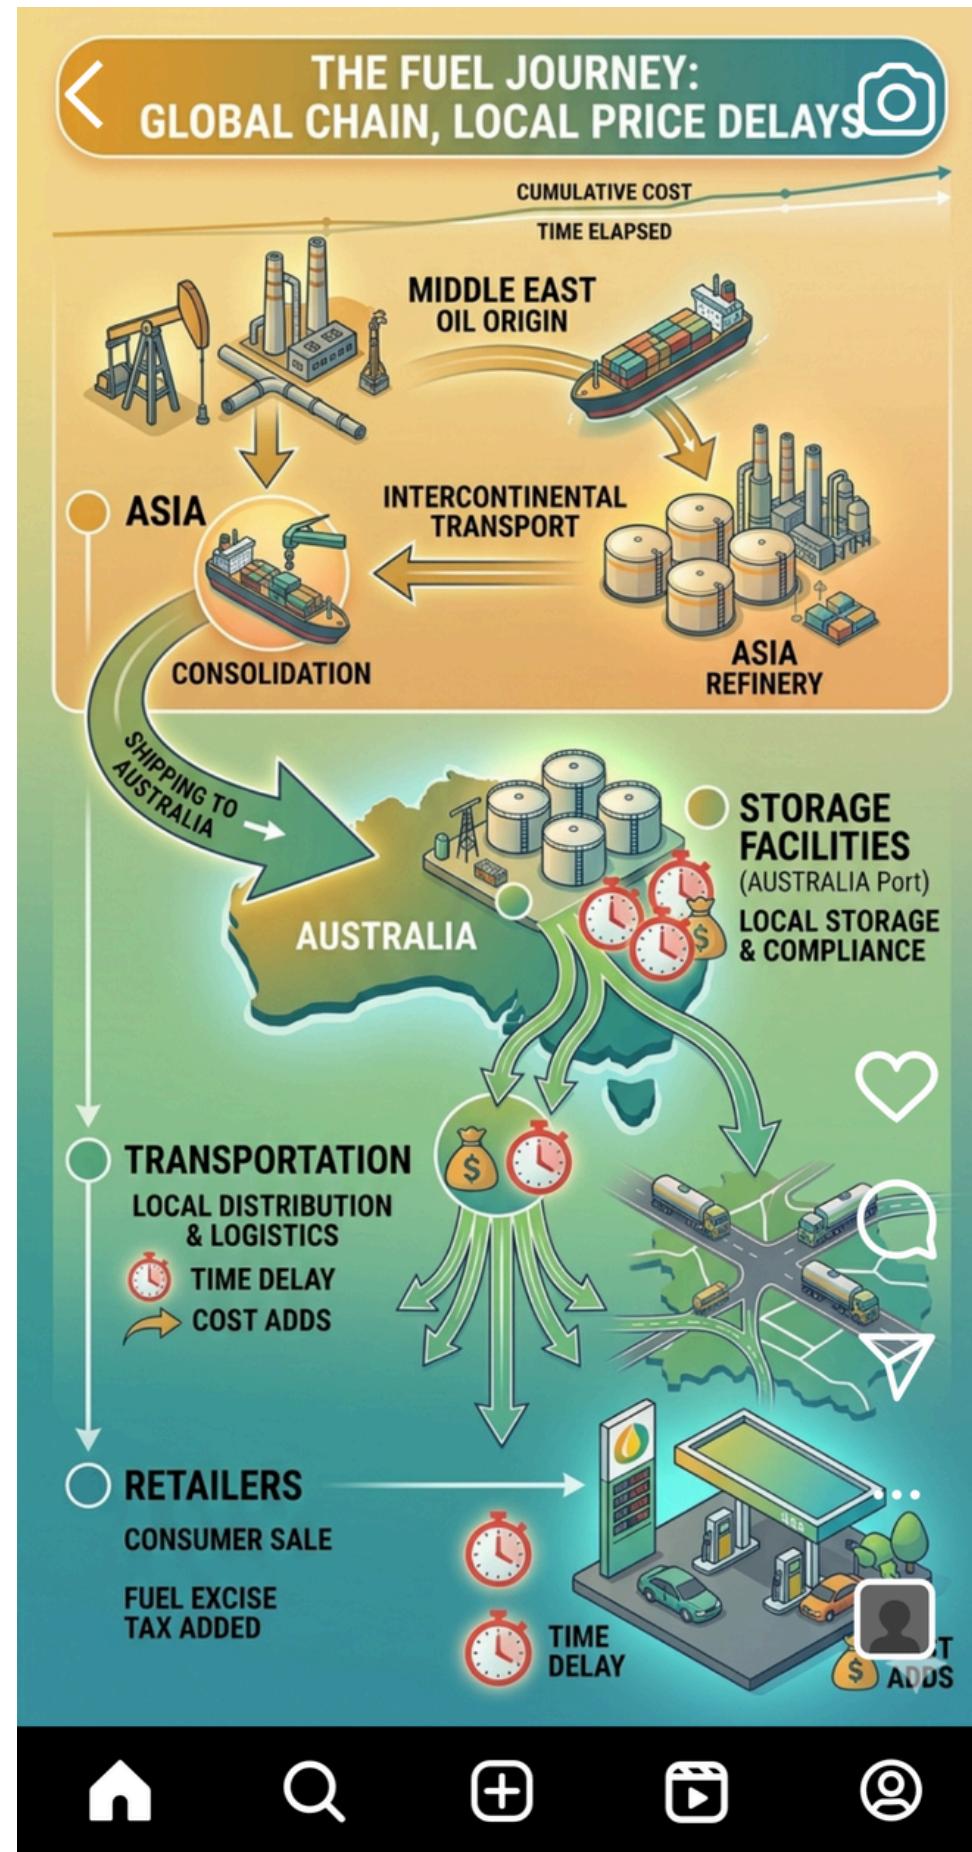

“Price drops take time to reach all stations.

Existing fuel stock and supply chains can delay the full impact.”

— Industry experts.

Supply chain matters

Fuel travels from the Middle East → Asia → Australia.

It is then stored, transported, and distributed before being sold.

Each step adds cost and delays price changes.

[#FuelPrices](#) [#PetrolPrices](#) [#CostOfLiving](#) [#Inflation](#)

Why it matters?

Drivers could save up to \$19 per tank with lower fuel prices.

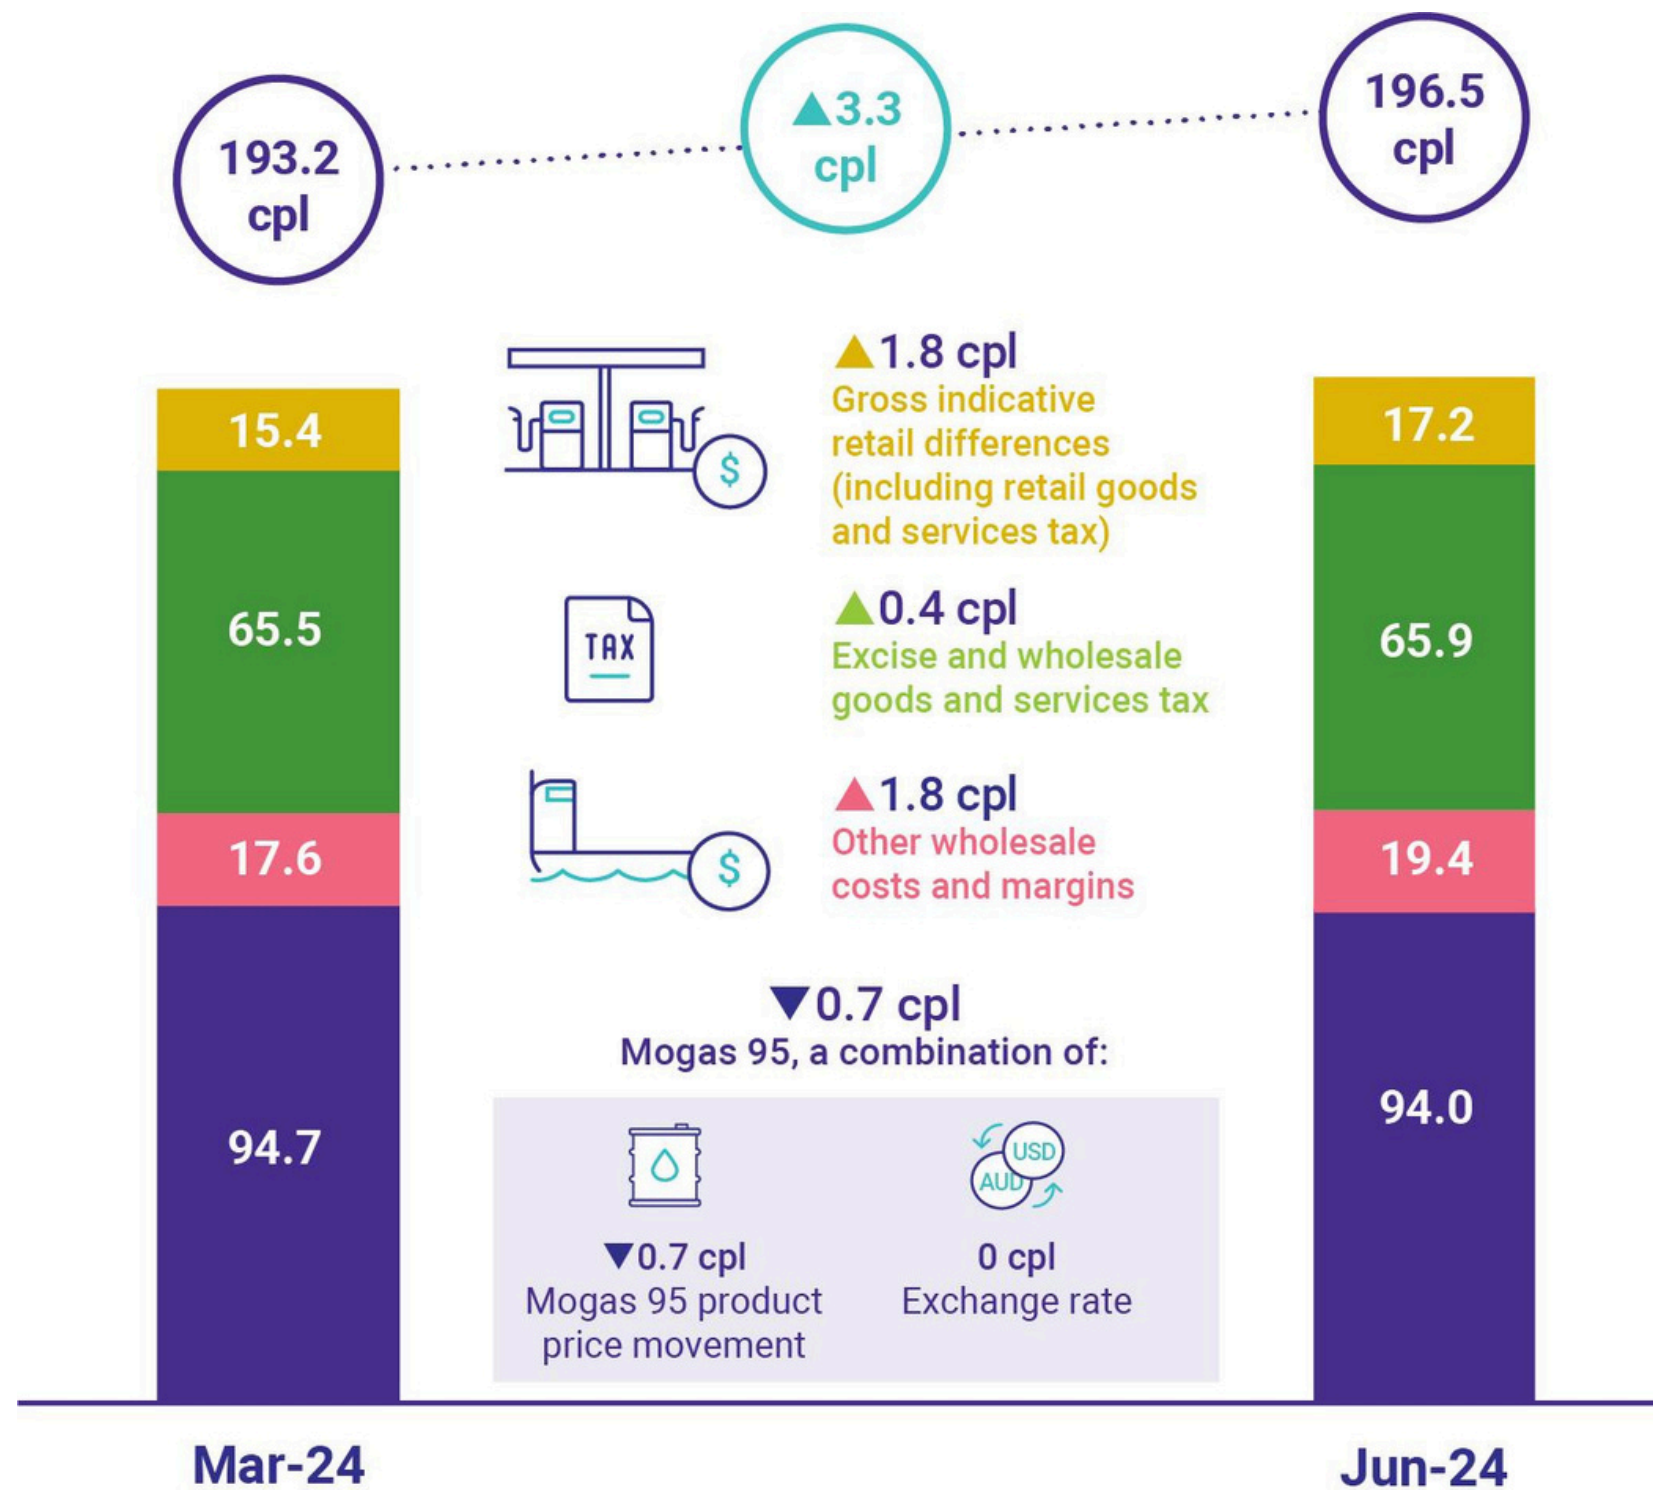

However, this relief may be temporary, as global oil prices remain uncertain and costs could rise again.

Fuel prices are finally dropping in Australia

Part 1: Policy Overview

The Australian government has introduced a temporary 50% fuel excise cut, reducing petrol prices by 26.3 cents per litre for a three-month period.

This policy is designed to provide immediate relief to households facing rising cost-of-living pressures, particularly in transport and daily expenses. Drivers are expected to save up to \$19 per tank, depending on fuel usage.

However, as a short-term tax intervention, its effectiveness depends on how quickly reductions are passed through the supply chain and whether global oil prices remain stable.

Part 2: Market Response

Adelaide recorded the sharpest price drop, with the price of regular unleaded falling by 25 cents from nearly \$2.60 per litre to \$2.34.

Melbourne recorded a 16.3 cent drop to about \$2.43 a litre, and Sydney saw a 12.7 per cent drop to \$2.44 a litre.

Hobart has the cheapest average fuel and dropped 18 cents to about \$2.39 per litre.

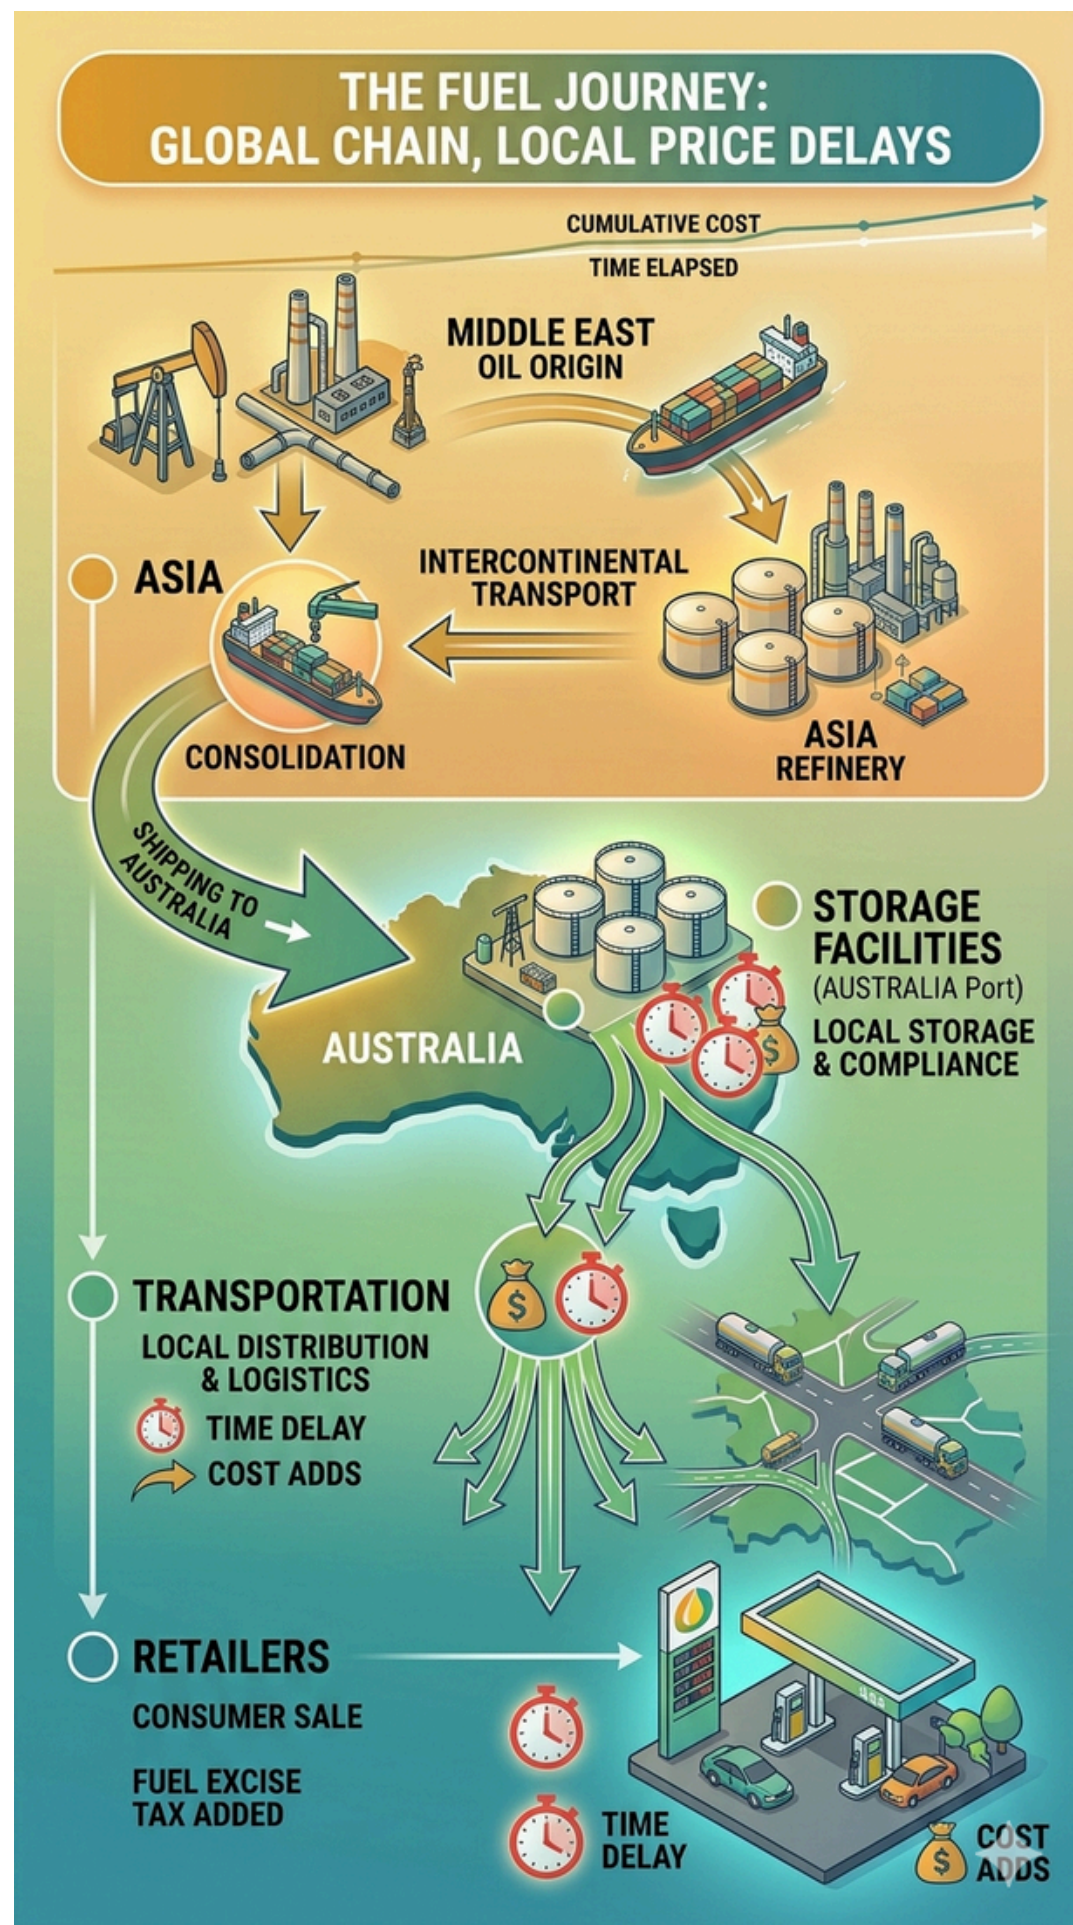

Perth dropped by 7 cents per litre and Canberra 13.5 cents per litre.

Darwin's prices dropped by 17.8 cents, but still has the most expensive unleaded in the country at \$2.46 per litre on average.

Across the country, diesel prices are still sitting at more than \$3 per litre, but the price has dropped by as much as 21.3 cents in Adelaide.

65L Tank = ~\$19 Savings 50L Tank = ~\$14 Savings

Part 3: Supply Chain Dynamics

Fuel pricing adjustments are influenced by a complex global supply chain.

Australia imports most of its fuel, with oil moving from the Middle East to Asia before reaching domestic storage and distribution networks.

Each stage introduces delays and additional costs, meaning price reductions are not immediate.

Part 4: Policy Implications

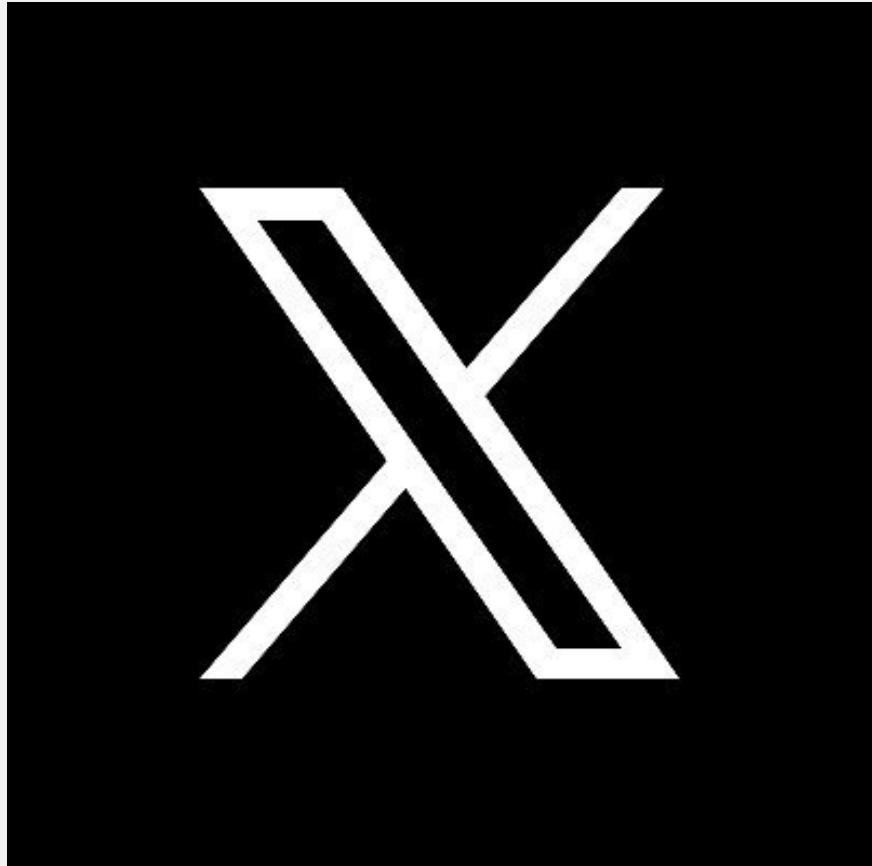

While the fuel excise cut provides immediate financial relief, its long-term effectiveness remains uncertain.

The policy does not address underlying structural issues in Australia's fuel market, including heavy reliance on imported energy and exposure to global price shocks.

Recent global tensions and supply disruptions have already demonstrated how quickly fuel prices can rise, offsetting domestic policy benefits.

This highlights broader concerns around energy security, supply chain resilience, and the limitations of short-term tax interventions in managing sustained cost pressures.

Price drops take time.

Fuel moves through a global supply chain before reaching stations.

Prices may rise again if global oil costs increase.
