

The Culture and Economic Impact of Vup——take Aza as an example

Ning Shen

**Why do audiences pay so much for Vup?
The Vup are not even real people.**

Introduction

Vup — —as known as VTuber, a branch of ACGN (A: animation, C: comic, G: game, N: novel) culture. They are streamers and most of them are from YouTube, Bilibili and Tiktok. They usually sing songs, play games and chat with their fans when live streaming. VTuber are based on anime characters, supported by motion and facial expression tracking software systems to move and speak freely like anime characters.

Shortcomings and deficiencies

Objects

The survey objects are mostly American undergraduates, which cannot represent all the audiences of VTubers.

Data

The object of my investigation is the Vtuber of bilibili, and the data of Bilibili in these articles are not very comprehensive, and the Internet environment and VTubers in China and foreign countries are not exactly the same.

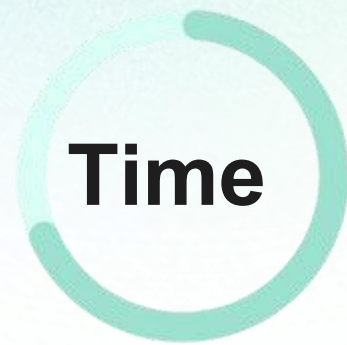

Depth

These articles are extensive enough, but there are some issues I care about which are not mentioned. For example, why would the audiences pay, how much would they pay and so on.

2.3 Questionnaires and Interviews

Interview in depth of Fans of Aza face to face or online——3 people.
General questionnaire ——100 people.

A week (From 5th November 2024 to 13rd November 2024).

In the next page.

- What is your age and gender?
- Who is your favorite Vtuber?
- What role do you think Vtuber play in your daily life?
- How long have you like VTubers?
- How long do you watch live a month, when do you usually watch it?
- Why would you pay/What do Vtubers do that makes you pay, and how much do you pay?
- Have you ever participated in a discussion in the Vtuber's topic tag?
- Have you ever participated in any offline activities of Vtubers?
- If there is a product combined with him, will it enhance your desire to buy?

Potential problems and risks

I may not be able to find suitable or enough interviewees.

I may not have enough time to collect samples and analyze data.

The questions in my questionnaire may not be completely reasonable, so it cannot give a good feedback of the real situation.
